

Compliance Evidence Report

SEIR Cloud Security
Report ID: compliance-20260824T192649Z
Generated: 2026-08-24T19:26:49.574454+00:00

Overall Status	PASS
Control Score	100.0%
Controls Evaluated	4
Passed	4
Failed	0
Requires Review	0

Executive Summary

This compliance evidence report evaluates 4 security controls across multiple frameworks (NIST CSF 2.0, CIS Controls v8, ISO 27001, and PCI DSS 4.0). All 4 controls achieved a PASS status, resulting in a 100% compliance score. Evidence demonstrates the existence and active status of key security infrastructure components including AWS WAF protection, threat correlation capabilities, incident response infrastructure, and executive reporting mechanisms.

Overall Assessment

All evaluated controls passed their assessments. The organization has established foundational security infrastructure across network protection, detection, incident response, and governance domains. This report provides control evidence based on point-in-time resource verification and does not constitute a certification of compliance with any regulatory framework.

Framework Scorecards

Framework	Score	Pass	Fail	Review	Status
CIS Controls v8	100.0%	3	0	0	PASS
ISO 27001	100.0%	1	0	0	PASS
NIST CSF 2.0	100.0%	4	0	0	PASS
PCI DSS 4.0	100.0%	1	0	0	PASS

Material Failures

None reported.

Items Requiring Review

None reported.

Recommended Actions

- Verify that AWS WAF rules are appropriately configured and regularly updated to address current threat landscape
- Confirm that threat correlation findings are actively reviewed and that detection processes are generating actionable intelligence
- Validate that incident response procedures are documented, tested, and that the infrastructure is being utilized for actual incident management
- Assess the frequency and content of executive reports to ensure they provide adequate security visibility and support informed decision-making
- Establish monitoring to ensure these infrastructure components remain active and functional over time

Control Evaluation Detail

Control	Category	Severity	Status	Observation
CTRL-001 AWS WAF Protection	Network Security	HIGH	PASS	DynamoDB table 'armageddon2-lab12-dev-waf-events' exists with status 'ACTIVE'.
CTRL-002 Threat Correlation	Detection	MEDIUM	PASS	DynamoDB table 'armageddon2-lab12-dev-waf-correlation-findings' exists with status 'ACTIVE'.
CTRL-003 Incident Response	Incident Response	HIGH	PASS	DynamoDB table 'armageddon2-lab12-dev-security-incidents' exists with status 'ACTIVE'.
CTRL-004 Executive Reporting	Governance	MEDIUM	PASS	S3 prefix 's3://armageddon2-lab12-dev-us-east-1-390402551087-reports/executive-reports' contains report evidence.

Evidence Limitations

- Evidence is based on resource existence and active status only; operational effectiveness and continuous operation are not verified
- No evidence of actual WAF event processing, correlation analysis, or incident handling is provided
- Report content and distribution of executive reports is not evaluated
- Configuration, access controls, and data retention policies for these resources are not assessed
- No evidence of testing, maintenance, or update procedures for these controls is included
- Point-in-time verification does not demonstrate sustained compliance or historical performance

Auditor Note

This report provides evidence of control infrastructure existence as of the evaluation date (2026-08-24). All controls passed based on verification that required resources exist and are in an active state. However, resource existence alone does not demonstrate operational effectiveness, proper configuration, or continuous operation. Auditors should conduct additional testing to verify that these controls are functioning as intended, that procedures are documented and followed, and that the infrastructure is generating the expected security outcomes. Recommend follow-up assessment of control design and operating effectiveness.

This document provides control evidence only. It is not a certification, legal opinion, or guarantee of continuous compliance.
